- **How it works:** After every loss, the gamer doubles their bet. When they eventually win, the profit covers all previous losses plus a profit equal to the initial base bet.

- **The Catch:** While mathematically sound in theory, a long losing streak can quickly tire a player's bankroll or strike the gambling establishment's maximum bet limit.

2. The Anti-Martingale/ Paroli Strategy (Medium Risk)

- **How it works:** The player doubles their bet after every *win* and goes back to the original base bet after a loss.
- **Application in Limbo:** Ideal for riding hot streaks while minimizing direct exposure during cold streaks.
- **The Catch:** Relies totally on stringing consecutive wins together.

3. The Fixed Target Strategy (Controlled Risk)

- **How it works:** The gamer keeps both the bet size and the target multiplier similar for every single round (e.g., always wagering £ 5 on a 5.00 x multiplier).
- **Application in Limbo:** This is the most mathematically worry-free way to play. It enables gamers to compute their expected session duration and manage their bankroll successfully without emotional decision-making.
