What is the Limbo Casino Game?

Limbo is an instant-win casino game popularized mostly by crypto-focused online casinos. Influenced by [bitz.io](#) the "Crash" mechanic, Limbo removes the ascending rocket or line chart, changing it with a single, instantaneous result.

When a gamer opens a Limbo game, they are provided with two primary inputs:

1. **The Bet Amount:** How much cash they want to bet on the round.
2. **The Target Multiplier:** The specific multiplier they hope the game will hit or go beyond (e.g., 2x, 10x, 100x, and even 1,000,000 x).

As soon as the gamer clicks the "Bet" or "Roll" button, the game instantly creates a random number. If the generated number is **greater than or equivalent to** the target multiplier, the gamer wins. If it falls below, the bet is lost.

How the Game Mechanics Work

At its core, Limbo is a game of likelihood. Unlike slots, where signs determine wins, Limbo relies completely on math and possibility portions.

When a player sets a target multiplier, the game instantly calculates 2 essential metrics:

- **Win Chance:** The mathematical possibility of striking that specific multiplier.
- **Payout:** The total return if the target is reached (Bet £ \ times £ Target Multiplier).

Example of Limbo Mechanics

To comprehend how target multipliers affect gameplay, think about the following standard setup (which typically consists of a 1% house edge):

Target Multiplier	Win Chance (%)	Potential Payout on £ 10 Bet
1.10 x	90.90%	£ 11.00
2.00 x	50.00%	£ 20.00
5.00 x	20.00%	£ 50.00
10.00 x	10.00%	£ 100.00
50.00 x	2.00%	£ 500.00
100.00 x	1.00%	£ 1,000.00
1,000.00 x	0.10%	£ 1,000.00

10,000.00

As revealed in the table, as the possible payout increases, the win opportunity decreases proportionally.
