

For a concern about tree health, describe visible changes and when they became noticeable. Include the whole tree in the record, not just a close photograph of one feature. Ask how the assessor wants photographs and previous work records presented.

Make the proposed work readable

Read the proposal alongside the original enquiry and ask whether the two refer to the same tree and concern. Check the purpose and practical arrangements as well as the task name. Request clarification if a broad phrase could describe more than one kind of work.

This tree-care planning guide from Progressive Tree Service focuses on tree disease observations and the information needed to discuss it clearly.

The brief for a property manager

Identify the property contact who can answer access questions and the person who reviews the proposal. Explain which entrances and routes are normally in use. Ask what needs to be arranged with other people before a date is discussed.

Questions to keep with the record

Which observations should be recorded before discussing a possible diagnosis or treatment? Can the written description be checked against the concern? Ask for an explanation that connects the answer with the particular tree and proposed work, then record anything still unresolved.

A practical next step

Keep the clarification with the proposal. If the scope changes, request an updated description rather than relying on a progressivetree.com tree service near me remembered conversation.

Save any proposed next step with the observations it addresses, without treating your notes as a diagnosis.

Pass on the agreed description itself, rather than shortening it into a general maintenance request.
