For example, on a platform with a 1% home edge:

- If a player sets a target of **2.00 x**, the win opportunity is roughly **49.5%**.
- If a gamer sets a target of **10.00 x**, the win possibility drops to **9.9%**.
- If a gamer sets a target of **100.00 x**, the win possibility plummets to **0.99%**.
