The core of the video game is an enormous, vertically mounted wheel divided into 54 sectors. These segments consist of:

The Myth of the "Crazy Time Slot"

To clear up any confusion: **There is no magical time slot where the video game is "set" to pay out more.**

Live gambling establishment video games run by certified companies like Evolution are strictly controlled and examined by independent testing firms (such as eCOGRA or iTech Labs). Every spin of the wheel is statistically independent of the last. Regardless of this mathematical reality, players often observe patterns in the video game's live tracker history. Why does this take place? It boils down to difference, human psychology, and analytical clustering. Over a short session, you may see all 4 bonus offer rounds hit within 10 minutes, followed by an hour of strictly numbers (1sts and 2s). This is entirely typical behavior for high-volatility video games.
