Established by Autowatch, the Ghost Immobiliser is the world's very first aftermarket CAN-bus immobiliser. Unlike traditional alarm or immobilisers that rely on different essential fobs or loud sirens, the Ghost is entirely hidden within the lorry's circuitry harness.

It works by intercepting the signals on the automobile's Controller Area Network (CAN-bus). When a driver attempts to begin their car, the engine will not crank or begin unless a distinct, secret PIN code-- ranging from 4 to 20 presses-- is gone into utilizing existing buttons in the automobile (such as steering wheel controls, door panels, or the center console).

Key Features of a Ghost Immobiliser:

- **Undetectable by Thieves:** Because there are no additional key fobs, LEDs, or radio frequency signals, diagnostic devices can not spot the system.
- **No Wire Cutting:** The device interacts directly with the lorry's data network without the requirement to cut basic automobile loom wires.
- **Service/Valet Mode:** Allows the car to be serviced or parked by a valet without compromising the secret PIN code.
- **Weatherproof:** Small and durable sufficient to be hidden deep within the car's internal architecture.
