Third-party gambling websites host these games. Gamers transfer their skins into the platform's bot inventory in exchange for website credits (often pegged to real-world worth, such as GBP or coins). These credits are then used to put wagers on a spinning wheel divided into colored sections-- normally red, black, and green.

How a Standard Round Works:

1. **Deposit:** The gamer deposits CS skins into the platform.
2. **Wager:** Players place their bets on several colors before the timer goes out.
3. **The Spin:** The digital wheel spins and lands on a specific color.
4. **Payout:** If the gamer's picked color matches the winning sector, their bet is multiplied based upon predefined chances. If they lose, the site keeps the credits.

Red	7 (e.g., 1-- 7)	2x	46.67%	
Black	7 (e.g., 8-- 14)	2x	46.67%	
Green	1 (e.g., 0)	14x	6.66%	

Why Green is your house Edge

The green sector (usually represented by the number absolutely no) is where the [Cs2skin CS2](#) platform protects its mathematical advantage-- commonly referred to as the **house edge**.
