What Is Case Opening in CS2?

In CS2, a "case" is a locked container that gamers can acquire or receive as a drop. When opened, the case arbitrarily yields a weapon skin, sticker, or other cosmetic product. Each case includes a swimming pool of items divided into a number of rarity tiers, and the [cs2 case opening](#) possibility of receiving any particular product is governed by a deterministic algorithm that mirrors the one used in CS: GO.

The case-opening UI is incorporated directly into the video game's main menu. Players choose a case, select a "key" (a separate purchase), and after that click a single button to expose the contents. The outcome is exposed with a brief animation, after which the item is included to the player's stock and can be traded or sold on the Steam Community Market.

How the Odds Work

CS2's case-opening chances are publicly recorded by Valve. The algorithm uses a two-step system:

1. **Rarity roll**-- A random number identifies which rarity tier will be awarded (e.g., Mil-Spec, Restricted, Classified, Covert, or Rare Special Item).
2. **Product roll**-- Within the chosen rarity, a second random number selects a specific skin.

Because the chances are fixed, the anticipated worth of a case is merely the amount of (item cost × likelihood). While this does not guarantee a revenue, it offers a mathematical baseline for gamers who desire to gauge long-term costs.

Normal Odds (per opening)

Rarity Tier Approximate Drop Chance
Mil-Spec (Blue) ~ 79.7%
Restricted (Purple) ~ 15.8%
Classified (Pink) ~ 3.2%
Covert (Red) ~ 0.65%
Rare Special Item (Gold) ~ 0.25%

These portions show why getting a Covert or Rare Special Item is remarkably uncommon.
