Preventing Fire Damage Outdoors

As you inspect your home, trying to fire proof it, you must keep in mind that your outdoors area is also a part of your home. Do not forget to inspect your patio, back yard, roof and garden when trying to minimize fire hazards as these places are as important as the indoors sections of your home.Wood Stored in the Backyard Storing wood in your backyard requires that you follow the basic fire prevention rules to minimize the chance that wood will catch fire that may lead to a larger scale disaster. If you make sure to maintain your wood safely, you can reduce the occurrence, size, and intensity of a fire. As a first line of defense, create a 30 feet safety clearance around stored wood. A green lawn is a good safety parameter, as long as clean of fire catching debris.Plant SafeAs there are some plants that ate more fire resistant than others, it is smart to plant these plants in the safety zone. Even with this kind of plants you must remove dry leaves, dead limbs, twigs and debris to prevent them from fueling a small fire into a more intense fire. Thin out trees and keep a fifteen feet space between crowns. This will help reducing the chance of fire spreading. If you own high trees or cannot perform this job yourself, hire a professional to do that for you. In addition, remove limbs and dead branches from 6 to 10 feet of the ground to prevent fire from spreading from the ground to the trees. RoofingIn the past, roofs were built of hazardous, flammable materials and many home losses were a direct result of the roof catching fire. Nowadays, there are new trends that promote fire safety. Consider using non-combustible roofing materials. When building or replacing the roof. Non-combustible materials include **construction services WA** class A shingles, metal, or terra cotta. If you dont have plans to rebuild your roof any time soon, you can still treat it with fire retardant processes and reduce roof flammability.Barbeque GrillsBarbeque frills require maintenance. Clean your grill and keep it free of dirt and debris build ups. You will find it easier to clean the grill after every use and remove dust and cobwebs before they build up. Check your hose and confirm it is in good condition and cracks free. Never use damaged propane tanks.

WA Best Construction is a Bellevue, WA–based remodeling company specializing in kitchen and bathroom renovations. The company works closely with homeowners to plan, design, and complete functional upgrades that improve comfort and usability. With a focus on clear communication, organized project management, and quality workmanship, WA Best Construction serves Bellevue and nearby communities with dependable renovation solutions.
