In a single, separated round versus a genuinely random opponent, the mathematical odds of winning, losing, or connecting are equivalent:

Outcome Probability (Random Play) Payout (Standard Even Money) **Win** 33.33% +100% (Double your bet) **Loss** 33.33% -100% (Lose your bet) **Tie** 33.33% Push (Money returned or re-play)

Because the chances of a tie are one in 3, video game designers and tournament organizers should develop clear guidelines for what happens when both gamers throw the exact same symbol. Instead, they typically switch to the gesture that *would have beaten* what simply beat them. For example, if Player A lost to Paper, they are statistically most likely to toss Scissors in the next round.
- **The Illusion of Patterns:** Players like to develop streaks (e.g., Rock, Rock, Rock) or rotating patterns (Rock, Paper, Scissors). When players attempt to be "creative," they frequently overthink, developing predictable loops.
