If a player cashes out effectively, they win their original bet increased by the current worth on the screen. However, if the video game crashes before they struck the cash-out button, the bet is lost entirely.

The unpredictability is what drives the gameplay. A round may crash nearly instantly at 1.01 x, or it could climb into the thousands before stopping. Due to the fact that the rounds last anywhere from a few seconds to less than a minute, the speed is relentless, using instantaneous satisfaction (or rapid heartbreak).

2. **The Launch:** The round begins. A visual representation-- typically a rocket, a plane, or an increasing line-- begins to ascend, and the multiplier ticks upward from 1.00 x.
3. **The Climb:** As the multiplier rises, possible profits increase. Stress develops as players see the numbers climb, weighing their greed against their worry of losing.
4. **The Crash:** At an entirely random point determined by a cryptographic algorithm, the video game crashes.
5. **The Outcome:** Players who squandered prior to the crash gather their revenues. Those who waited too long lose their stake.
